Northern Clearing takes pride in being a step ahead of the competition, adapting quickly and managing the toughest projects that other contractors do not have the resources to accomplish. We provide a superior level of safety, compliance and production.

Northern Clearing offers an array of services to facilitate right of way construction and maintenance, including state-of-the-art vegetation management practices. Our experienced staff, equipped with the most comprehensive set of resources in the industry, can adapt quickly to changing conditions and provide clients with efficient and high-quality vegetation management services.

Northern Clearing offers vigorous employee education programs through the Wisconsin Indianhead Technical College to ensure that the vegetation management programs adhere to the highest standards of safety. Training sessions cover a variety of topics that include chainsaw safety, tree climbing techniques and electrical hazard awareness. Our commitment to education ensures that our employees meet an exceptional standard of safety through documented training programs.

Utilizing outside training sources and actively encouraging and enabling employees to become ISA Certified Arborists and TCIA Certified Tree Care Safety Professionals further enhances Northern Clearing's commitment to education. When working with pressurized pipelines, we staff the projects with experienced employees who are properly operator-qualified for the task.

Finally, Northern Clearing has achieved multiple documented ISO certifications (9001, 14001 and 18001), confirming our commitment to remain in compliance with safety and environmental regulations. The ISO organization provides third-party auditing services for companies, assuring clients that Northern Clearing applies best practices to every project we take on.
